Working Paper No. 2

Ayele Gebre–Mariam

2005
NCCR North–South

The overall aim of the Swiss National Centre of Competence in Research (NCCR) “North-South” is to enhance sustainable development in selected contexts through research partnerships involving institutions within Switzerland as well as their partners in developing and transition countries. By developing an understanding of syndromes of global change, identifying mitigation potentials, and supporting innovative solutions, the NCCR North-South aims to generate new knowledge, develop research capacities, and support societies in the South and East as well as in Switzerland.

Glossary

awraja  |  pre-1991 administrative unit (province or sub-region)
birsoobis  |  prosopis juli flora
chat  |  mildly narcotic leave produced in the Ethiopian highlands
deghier  |  black headed sheep of Somalis also known as Berbera Blackhead
dayr  |  short rainy season in the Somali lowlands
gu  |  long rainy season in the Somali lowlands
ha  |  hectar
hauud  |  grazing area stretching from Jijiga along the Somal border
jilib  |  smallest clan lineage level
jilaal  |  long dry season in the Somali lowlands
guurti  |  council of elders
hagga  |  short dry season in the Somali lowlands
kebele  |  lowest administrative unit, sub-location
keremta  |  long and heavy summer rains of the highlands
masl  |  meter above sea level
ql  |  quintal
teff  |  cereal crop produced in Ethiopian highlands
ugas(es)  |  title of traditional Somali elder
wereda  |  district
yarad  |  dowry payment
xeer  |  Somali customary law and contracts
1 Introduction

1.1 The Somali Region

The Somali region occupies a large geographical area in the eastern and southeastern part of Ethiopia. It lies between 4 degree-11 degree N latitude and 48 degree E longitude. The area of the region is estimated to be 340,000 square kilometres. It is bounded by Kenya and Somalia to the south, the Republic of Djibouti and the Afar region to the north, Somalia to the east and southeast and Oromiya region to the west. The Somali region is divided into 9 administrative zones and 53 weredas (2005). The Somali region falls under the arid and semi-arid agro-ecological and climatic zone. Its altitude ranges from 400 masl in the southeast to about 1000 masl in the north. In some hilly areas the maximum elevation goes up to 1600 masl.

The rainfall in the region has been low, erratic and unreliable. The northern part encompassing Jigjiga and its surroundings get the keremta rain from July to September and the rest during gu from March-April. The south and southeastern part of the region receives rainfall during dayr season from October to November and gu season from March to April. The temperature ranges from 20-45° C and the average annual rainfall is 300-500 mm. Low relative humidity and little cloud cover is observed in the region. Evaporation is twenty more times in excess of rainfall in some places in the region. The region receives insufficient amount of rainfall and frequently faces droughts that cause shortage of food and water for humans and livestock.

According to CSA data of the 1997 census, the population of the region is estimated at 3,439,860 of which 85.7% live in rural areas while the remaining 14.36% live in urban areas. The population is projected to reach 4.8 million in 2010. About 92% of the population of the Somali region is estimated to be illiterate. Of the literate population 28% are urban dwellers. The corresponding figure for the rural areas is 4.6%. The region has poorly developed socio-economic services and infrastructure such as schools, health facilities, transport and communication, water supply and marketing services. As a whole the region has been neglected and lags behind in social and economic development. The highest student enrolment ratio is 11.8% for primary level, 7.7% for junior high school level and 5.5% for senior secondary school level. The region is poorly served in terms of health services and below the national average, which is 61%. Communicable diseases and malnutrition are widespread.

Most of the people in the region are pastoralists and agro-pastoralists and livestock is the main source of livelihood. The major livestock species they raise include cattle, sheep, goats and camels. In areas of lower altitude and lower moisture content camel, sheep and goats are the dominant livestock species while in the relatively higher altitudes cattle raising is the most dominant livestock farming. Livestock is the backbone of the economy in the region and about 85% of the Somali population depends on livestock products for their livelihood. Crop production is also practiced in the region and important farming zones include Godey, Jigjiga, Liben and Afder. The urban economy is dominated by trade services. The most important drainage systems of
the region are the Wabi Shebelle, Genale and Dawa rivers. The region is characterized
by the presence of dry basins such as the Ogaden and Aysha plains.

Past droughts have claimed the lives of large number of livestock and have created
repeated crop failures. There are also occasions when no crop is harvested due to total
absence of rain. This drought cycle is reported to repeat once every two to three years
(Ayele Gebre-Mariam & Tadesse Haile 1990). The major droughts of the past three
decades are known as lafaad, (1972-74), dabadheer (1984-85), hurgufa (1994) and
shangadha/dabagunud (1999-2000). Due to prolonged drought periods forests are
devastated for construction and charcoal use and livestock losses have incurred. The
majority of the region’s population is composed of Somali speaking pastoralists who
are divided into different inter-related clans, each occupying its own territories.
Fighting between these groups takes place over grazing resources and water points.
Many of the clan territories stretch across the international boundary into Somalia and
the same groups live on both sides of the border, which has facilitated trade and
services in the region (Ayele Gebre-Mariam 2004).

1.2 The Ogaden

The Ogaden\(^1\) is a huge rangeland in Eastern Ethiopia and it is the favoured grazing land
within the Somali regional state and in the wider region. There is some extensive open
grassland in the area often associated with cultivation. It is also the major livestock
production centre in the region. Pastoralism extends far northwards and westwards into
the foothills of the highland massif, increasingly tending towards agro-pastoralism. The
proper Ogaden excludes the semi-agricultural areas of Jigjiga and beyond, but includes
the minority clans such as the Isaaq living in the area and entering it seasonally. Isaaq
clans mainly utilize the haud.

The Ogaden proper is 240,000 square kilometers. The rangeland is not ecologically
homogenous. The Ogaden is a plateau, which falls from 1,500 meters in the northwest
to about 300 meters in the southern limits including the Wabi Shebelle basin. The
higher altitude areas between 1400 and 1600 meters are characterized as semi-arid,
receiving as much as 500-600 mm of rainfall annually. More typically in the Ogaden
the average annual rainfall is 350 mm and less. The landscape consists of dense
shrubland, bush grassland and bare hills. The soils are calcisol, gypisol, regosol and
vertisol and fluvisol and are marginal for crop production. The Ogaden has no growing
period from rainfall and irrigation is promptly for crop production.

Apart from Somali minority groups inhabiting the Ogaden, the other minority groups
practice flood recession irrigated agriculture along the Wabi Shebelle, Genale, Weib
and tributaries of these rivers. The minority groups include Rer Barre, Woredubbe,
Minority groups such as Boni, Yibir and Midgan live among the Somali clans and are

---

\(^1\) Ogaden is primarily used as a geographical reference for areas lying south of Jigiiga zone and as well as
a genealogical reference for the Somali Ogaadeen clan lineages.
providing services such as blacksmithing, leather making, artefacts, etc. (Ayele Gebre-Mariam 1976).

The dominant tree species identified in the Ogaden are *tamarix aphylla*, *calotropis procera*, *parkinsonia aculeate*, *balanites aegyptica*, *dodonaea angustifolia*, *rumex neurosus*, acacia species and *combretum molle* (MOA 2000).

The main mode of production in the Ogaden is agro-pastoralism. Crops such as maize and sorghum are mainly grown using rain fed agriculture. Cultivation using flood recession and pumping water from the Wabi Shebelle river is practiced by some agro-pastoralists. The area is known for camel and small stock rather than cattle. But, there are large herds of cattle in the region. Small stock especially black head sheep are exported to the Middle East. The Somali goat breed is referred to as *deghier*, with white colour and large body size.

The link to Somalia is critical for the Ogaden as livestock is exported through Somalia and manufactured goods (clothing, food items such as pasta, sugar, rice, tea locally consumed) come through the Somali ports of Berbera (Somaliland), Bossaso (Puntland), Mogadishu and Kismayo (southern Somalia). The Ogaden’s centre of attraction for trade is towards Mogadishu rather than Addis Abeba. The trade routes between the Ethiopian highland and Somali lowlands facilitate the flow of *chat* and *teff* in the Ogaden.

The estimated total area suitable for irrigation in the Wabi Shebelle basin is 345,000 ha. This consists of about 12% of the total irrigable land in the country (Imperial Ethiopian Government 1973). From this 265,000 ha is classified as class 1 that is described as very suitable for irrigation. The remaining 90,000 ha are classified as moderately suitable for irrigation. According to the Ministry of Water Resources 113,000 ha of land is suitable for irrigation to be developed from the Genale river (WRTDA 1987). The same study also identified about 50,000 ha of irrigable land in the lower Weib basin.

The Wabi Shebelle, Weib and Genale rivers are the major water sources for irrigation development in the Ogaden. The area is criss-crossed by the Wabi Shebelle river and by other seasonal rivers such as the Fafan, Jarar, Dakata and Erer to the west. The eastern Horn stands out as a great plain separate from this river complex. Water is the main constraint in the development of the irrigation in the Ogaden. Thus only 40% of the suitable irrigation land can be developed due to water constraint. The agro-pastoralists use several techniques to harvest water. Harvesting run-off river water, use of floods of the Wabi Shebelle and other rivers, pumping water, the use of the riverbed of the Wabi Shebelle river for cultivation during its low flow are used to cultivate crops.

The Ogaden has a potential of about 142 billion-meter cube of natural gas, which consists of about 71% of the total estimated natural gas in the country. A detailed study in the Calub area revealed a potential of 30 billion meter cube of natural gas to exist for exploration (MOME 1986). Geological surveys and exploration activities made so far
by the Ministry of Water Resources have not indicated the presence of oil potentials in the Ogaden for commercial exploitation.

The Ogaden is endowed with plant species, which produce gum arabic, olibanum, myrrh and oppoponex. It has been estimated that the Ogaden has a potential of producing 11,250 ql of gum arabic and a total of 46,000 ql gum olibanum, myrrh and oppoponex annually (Ayele Gebre-Mariam & Tadesse Haile 1990). In Afdar in the south of the Somali region salt is exploited for commercial purposes. The some study reveals a potential for the exploitation of 15,000 ql of salt per month to exist in Afdar (Ayele Gebre-Mariam & Tadesse Haile 1990). The modern agricultural sector consists of a negligible portion of the overall agriculture in the Ogaden, which has been operating in different forms since 1966. Since the late 1980s modern agriculture has been concentrated around the Godey state farm, which has a net irrigation land of about 2548 ha. The farm was managed by the Gode State Farm under the auspices of the then Awash Agricultural Development Corporation. Cotton is the major crop cultivated followed by maize.

The interdependencies between the Ogaden with the Chercher highlands, the Bale highlands Dire Dawa and neighbouring Somalia are crucial for understanding the production system in the Ogaden. Symbiotic and competitive relations are observed between the Ogaden and the highland production system. On the one hand symbiotic relations are exhibited in terms of economic and social relations and exchange relations between economic niches. On the other hand competition for grazing between the Ogaden and pastoralists in Somalia and the highland farmers appears to have an overriding effect on the rangeland causing ecological degradation. The highlanders and sub-highlanders send their animals into the lowlands in search of pasture during the dry season. The rangeland also serves as a source of fuel wood for the highlands and towns and thus forests have been denuded as a result of extraction of the forest resources. This takes place on the boundary between Harar and Bale highlands and the Ogaden.

1.3 The Godey Zone

Godey zone is 105,000 square kilometres and located in the Ogaden plateau (in geographical terms) but within the Somali region (in political/administrative terms) with a population of 353,551 according to the population census of 2001. 95% of Godey zone is made of grazing land. Godey is one of the nine administrative zones of the Somali Regional State of Ethiopia and it comprises the seven districts Godey (until 1995 host of the regional capital), Denan, Adadley, Kelafo, East Imi, Mustahil, and Ferfer. Six of the seven districts are located along the banks of the Wabi Shebelle river that crosses into neighbouring Somalia. 40-50% of the population depends upon irrigation, 25-30% on agro-pastoralism and 20-30% on pastoralism and less than 1% on urban service activities. Godey is characterized by an “extensive flat to gently sloping topography” that accounts for about 94% of the zone’s total area (IPS 2000). The length of crop growing period ranges from 0-75 days (IPS 2000). The soil types in Godey zone include xerosols, solonchaks, yemosols, lithosols, vertisols, arenosols and fluvisols. The dominant soil is calcic xerosols. The soil is ideal for livestock rearing rather than crop cultivation.
An estimated 56% of the total area of the zone is occupied by grazing land consisting of open grass land, bush and shrub grass land and wooded grass land, while 33% is occupied by wood land, shrub land and bush land. The remaining area is utilized for crop farming (Ayele Gebre-Mariam & Tadesse Haile 1990). Godey has two rainy seasons accompanied by two long dry seasons. The main rainy season called gu lasts from March to May and the short dry season known as hagga from June to August. Hagga is followed by the short dayr rains between September and November and the long dry season jilaal from December to March. The mean annual rainfall based on Godey data is about 300 mm. The zone has a potential evaporation rate of 3100 mm per year. The average precipitation varies from 0 mm in the dry months of July and August to 110 mm in April during the main rainy season.

Generally, the area is deficient in moisture through out the year. The pastoral areas of Godey zone are more prone to drought than most other parts of the Somali region. Temperatures vary from 19° C to 36° C, sometimes reaching 40°C. The mean temperature is 28° C. In Godey zone, the mean maximum temperature is 38° C and the mean minimum temperature is 18° C. The highest mean temperatures prevail during February to March. The relative air humidity of Godey, which is at the centre of the lower valley, is 55%. The mean daily sunshine hours on Godey are highest between June and September ranging from 4-6 meter per second. Open pan evaporation is highest during the months June to September due to strong winds. Records at Godey show an average of 11 mm/day during these months (Ayele Gebre-Mariam & Tadesse Haile 1990).

An estimated 80% of the zone’s inhabitants are composed of rural pastoralists and agro-pastoralists, an exception applies to Kelafo and Mustahil weredas where sedentary farmers of Bantu descend (Rer Barre) dominate. The Rer Barre who are associated with Hawiye in Godey zone occupy the down stream Wabi Shebelle and Juba rivers in southern Somalia. The Shebelle are a minority group practicing flood recession irrigated agriculture along the Wabi Shebelle in the Imi wereda. Drinking water for human and animal consumption mostly originates from the Wabi Shebelle river.

The rain fed and cultivated land in Godey represents 5% that is 5,250 square kilometres. Only 20% of Godey zone consists of arable land currently under cultivation, most of it under irrigation along the Wabi Shebelle river (SCF-UK 2001c). As in other parts of the Somali Regional State land is collectively owned and managed by the sub-clan lineages occupying the territory. Shortage of good farmland has been reported in areas of flood-recession cultivation in proximity to the riverbanks. SCF-UK reports that “the dependency on stream cultivation means constraints to the amount of land they can use; extra land can be used in areas not fed by streams, which carries increased risk of crop failure due to inadequate rain. This is likely to be a problem for the future when existing farms are sub-divided for the families of the current generation of sons” (SCF-UK 2001c). Godey zone was struck by a severe drought in 1999/2000 that caused massive human and animal loss. The zone was among the hardest hit areas within the Somali region and most pastoralists of the zone claim to have lost between 70 % and 90% of their cattle (Guinand 2000). The 1999/2000 drought is locally known as the odykawayn, i.e. literally “bigger than the oldest person”, meaning “worse than even the oldest person can remember” (SCF-UK 2001c).
According to IPS (2000) the livestock population of Godey zone includes 402,000 cattle, 1,004,000 sheep, 636,000 goats, 8,000 donkeys and 14,000 camels. The riverine population practices irrigated agriculture using water pumps and flood recession farming. In Godey zone uncontrolled flood recession takes place every three years when the river level is higher than normal and the land without canals is flooded. The livestock from Ogaden is mostly sold on markets in Somalia rather than in Ethiopia. Manufactured and food items from the Middle and Far East make their way to the Ogaden and its environs. The means of exchange is the Somali shilling which is the de facto currency of the area. During the field research (March 2005), Somali shilling equivalent to birr 300,000 was burnt by the government security in Kelafo (50 Ethiopian cents is equivalent 1000 shillings) for the reason that the community is not using Ethiopian Birr. The researcher was at Kelafo a day after the incidence took place. No reaction was observed from the community or individuals at that time.

1.4 Godey Wereda

The climate of the 
wereda
is arid to semi-arid marked by drought, seasonal variations and an average rainfall between 150-250 mm. Imi 
wereda
in the north, Kelafo 
wereda
in the south, Adadley 
wereda
in the west and Denan 
wereda
in the east bound Godey 
wereda.

The altitude of Godey 
wereda
is 260 masl. The mean temperature is 28° C with minimum and maximum temperature of 22° C and 35° C respectively. The mean annual rainfall is about 200 mm distributed in two rainy seasons gu (April-June) and dayr (October to December). The natural vegetation in the 
wereda
is a mixture of deciduous bush land and shrub land with different species. The farming system is pastoralism and agro-pastoralism. Increasingly, destitute agro-pastoralists are becoming settled farmers. They mostly consist of returnees from Somalia who came back to Somali region after the collapse of the Siyaad Barre regime and other local livestock poor households.

According to CSA (1994), the population of Godey 
wereda
is 45,755 persons excluding the Godey town population. The estimated population of Godey 
wereda
in percent, in the riverine, agro-pastoral, and pastoral and urban setting is 30, 40, 25 and 5 respectively (SCF-UK 2001a). The clans living in Godey 
wereda
mainly consist of Abdalla Tolomogge, Rer Mohammed, Bah Gerri, Awdak and Abdille. Godey 
wereda
has an estimated cattle population of 352,000, 244,350 sheep, 135,000 goats and 45,000 camels and equines together (SCF-UK 2001b). The ecosystem of the 
wereda
is fragile and subject to intensive grazing, intensive destruction of tree for fuel wood and construction material. The area is highly denuded and exposed to soil and wind erosion. This phenomenon of environmental deterioration has been observed even during the early 1990s (Ayele Gebre-Mariam & Tadesse Haile 1990).

1.5 Adadley Wereda

Adadley is one of the 
weredas
of Godey zone situated in the Ogaden basin. East Imi in the north, Kelafo in the south, Godey in the east and Hargele 
weredas
in the west
bound Adadley wereda. According to SCF-UK (2001a), the wereda has a population of 46,661 persons. The clans in Adadley wereda are Awlihan, Abdille, Makahil, Harti, Sherif, Shekash and Lelkede. 10% depend on riverine cultivation, 28% are agro-pastoralists, 60% are pastoralists and 2% are urban dwellers (SCF-UK 2001a). The wereda was established in 1964 and then the headquarters was at Gereblow. Traces of the village/settlement are not seen nowadays. In 1991, after the collapse of the Siyaad Barre regime, the Awlihan returnees established Bohol Hagere as the new capital of the wereda.
2 Methodology and Resource Use Conflicts

2.1 Data Collection

The Ogaden Welfare Development Association (OWDA), a local NGO, facilitated the implementation of this study by providing the researcher with a letter of introduction to the Godey zone administration to enable him to carry out the study. The number of persons interviewed by the author is about 90, consisting of elders, youth, women, agro-pastoralists and pastoralists. The data for the study has been collected in the month of March 2005. Both salaried elders (guurti) and bush elders were interviewed as key informants. Other persons interviewed were carrying out their routine activities such as tending livestock, farming and relaxing in teas shops. The wereda and deputy wereda administrators of Adadley and Godey were consulted as well. Regional parliamentarians from Awlihan and Abdalla Tolomogge in Jigjiga participated actively in discussing the conflict issue between Abdalla Tolomogge and Awlihan with the researcher. Other parliamentarians and ugases from the nearby clans were also consulted. Discussion was also held with the ugas of Abdalla Tolomogge in Addis Abeba.

Mohammed Nur Hassen from Abdalla clan assisted the author in translating from Somali into English and was engaged from March 8-30, 2005. Some of the difficulties encountered when traveling through Godey wereda were the security situation to the north and east of Godey town. There was a security search in Godey town for two days during which the researcher was unable to move out of town.

Both published and unpublished documents were read prior and after the study. While in the field the main tool used was focus group discussion on the basis of a checklist prepared by Hagmann (2005). Teashops and wereda offices served as discussion sites. The participants consisted of men, members of the council of elders (guurti), bush elders, salaried elders and heads of subclans and lineages and women. A minimum of one to a maximum of 12 men participated in the informal discussions. Among the big crowd the active participants were usually between one and three persons. Others intervened whenever they felt like contributing to the theme under discussion. Discussions with two to four elders held in their homes were common. After long hours of discussion the participants asked for money to buy chat. Informal discussions were held with agro-pastoralists on the crop fields and among pastoralists in teashops. These discussions were lively and open.

2.2 Assumptions and Hypotheses

The Horn of Africa is home for pastoralists and agro-pastoralists and is endowed with conflicts associated with natural resources. Some conflicts are caused by raiding livestock, which is the case for Ethiopian and Kenyan, Sudanese and Ugandan pastoralists and agro-pastoralists. The second type of conflict is violent and involves the killing of people over the control of natural resources. This second type of conflict
is at the centre of this research. Processes of cooperation and exchange relations prevail amidst violent conflicts. Three working hypotheses guiding the research (Hagmann 2004) are examined. They include:

- Hypothesis 1: Conflict transformation is enabled through the inclusion and participation of stakeholders who are not directly involved in violent disputes over natural resources.

- Hypothesis 2: The integration of customary and modern procedures and institutions for conflict and resource management is an effective conflict transformation strategy.

- Hypothesis 3: Violent multiple resource user conflicts are settled through the exchange of differentiated bundles of property rights for diverse users in space and time.

Some scholars claim that the increasing scarcity of resources has increased the frequency and intensity of violence among pastoralists and agro-pastoralists in the arid and semi-arid areas over the last decade. This scarcity has been compounded by state interventions in agricultural production, nationalization of rangelands, and sedentarization of nomadic population, privatization of land and break down customary governance and availability of cheap firearms (Abbink 2000, Abdi Umar 1997, Lane & Moorehead 1996 and Mkutu 2001). The author shall consider this theoretical framework with some modifications.

What has effectively been observed in the study area is the sedentarization of nomadic populations, some privatization of land, a break down of customary governance and availability of cheap firearms. State intervention in agricultural production has taken place but discontinued. Yet a nationalization of the rangelands has not taken place in the Somali region. Resources are getting scarce due to increasing human population pressure and livestock populations. The increasing human population needs more resources in terms of food, health and social services, while the increasing livestock populations demands more veterinary drugs and better services. But this increase is not matched by an expansion of services and this exacerbates conflicts.

The conflict between Abdalla Tolomogge and Awlihan is mainly over land resources. The conflict takes place in Adadley wereda where both clans claim land ownership. Before 1974 conflicts between the two clans revolved around livestock raiding. After 1974, because of scarcity of resources and migration of Awlihan from El Berdey (Somalia) into the Wabi Shebelle basin, the conflict turned into a land issue, became violent and resulted in the death of several people from both groups. The Ethiopian government used to operate a research station for crops, vegetables and fruits under its agricultural programme in Godey. The government also managed the state farms that were established on pastoralist land following the resettlement of destitute highland farmers in the Godey area. Claims over land conflict between Awlihan who are predominantly pastoralists and Abdalla Tolomogge who are predominantly agro-pastoralists. Few Awlihan agro-pastoralists aspire for farmland and few Abdalla...
Tolomogge want to engage in multi-species pastoralism. Prior to the 1990s the conflict revolved around camel looting for dowry payment (*yarad*) and to build up a herd to make a viable household. The conflict is exacerbated by high population pressure that embarks on multiple resources from both Awlihan and Abdalla Tolomogge.

The introduction of human and livestock health services has increased the human and livestock population respectively. Multiple user conflicts are related to chronic forms of poverty in conjunction with a process of commodification and integration into national and global market economics (Blench 2001). Pastoral resources are depleted due to the need for fire wood, building material, livestock feed, roof thatching, crop growing and intrusion by outsiders such as town people of Abdalla Tolomogge, Awlihan, other Ogaden clans and highlanders.

2.3 Structure of Report

Chapter 3 the study looks at the political and institutional setting of Godey and Adadley *weredas*. Chapter 4 examines the pastoral economy and agro-pastoral system. Chapter 5 examines how past droughts and floods have affected the Awlihan and Abdalla Tolomogge. The kinship structure and territory claim of both clans is depicted in Chapter 6. Chapter 7 looks at natural resources such as grazing/browse, water and how the two clans use them. Chapter 8 depicts the traditional social structure, which governs the Abdalla Tolomogge and Awlihan. In chapter 9, the symbiotic and cooperative relation of Abdalla Tolomogge and Awlihan are examined including blood payment modalities and the external factors that ignite fire between the Abdalla Tolomogge and Awlihan. The last chapter advances a number of concluding remarks and recommendations.
3 Political and Institutional Setting

3.1 Background

In the past but less so today the political agenda of the Ogaden has been secession and forming a greater Somalia with ethnic Somalis in Somalia, Djibouti and Kenya. The Western Somali Liberation Front (WSLF) with the support of the Somali government fought two wars with the Ethiopian government in 1964 and 1977-78. After the downfall of the Derg, the Ethiopia’s Peoples Revolutionary Democratic Front (EPRDF) took over power in 1991 and established a federal structure in Ethiopia. The Somali inhabited territory was called Somali regional state or region 5. Each clan produced its own political party at the beginning of the 1990s. Later on the kinship based parties merged into the predominant Somali People’s Democratic Party (SPDP). Since 1994 the Ogaden National Liberation Front (ONLF) operates as a rebel group in some zones of the region. It seeks liberation from Ethiopia aiming to set up an independent state of Ogadenia.

Prior to the establishment of Godey as a wereda in 1964, Godey and Adadley weredas were under Kelafo administration. The Aden Abdalla and Barer Saad lineages of Abdalla Tolomogge then had good relation with the Awlihan, except from few incidents of looting of livestock between 1900 and 1947. Godey was only established after the bridge on the Wabi Shebelle river had been built. The Imperial Ministry of Interior established a farm for drought victims west of the Wabi Shebelle river. An airport was also built. These infrastructures made Godey an awraja centre during that period.

Some informants state that Godey and Adadley weredas were formed at the same time. Godey wereda encompasses the eastern part of the Wabi Shebelle river and Adadley the western part of the river. The capital of Godey wereda was Godey and the one of Adadley was Gereblow in the 1960s. There is no trace of the town Gereblow today. Some informants talk about two to three iron sheet covered houses then. Other Abdalla Tolomogge informants state that the area currently belonging to Adadley wereda was part of Godey wereda and that there was no Adadley wereda as such.

After the collapse of the Siyaad Barre regime there was an exodus of Ethiopian Somali returnees from Tolomogge and Awlihan to Godey area. The returnees had initially fled to Somalia after the Ethio-Somali of 1977-78. Upon their return to Ethiopia many returnees lived in shelters along the banks of the Wabi Shebelle river at the beginning of the 1990s. The United Nations High Commission for Refugees (UNHCR), NGOs and the then government Relief and Rehabilitation Commission (RRC) were supplying relief food to the internally displaced people. After some time it became impossible for the Abdalla Tolomogge and Awlihan to live in the same camps. There was frequent fierce fighting over trivial matters. The inherent cause was the land that the Abdalla Tolomogge was cultivating. The ugas of Abdalla Tolomogge, Abdi Rahman Muhumed Kane, who was heading the Peace and Reconciliation Committee of Godey wereda at that time, proposed to move the Awlihan west of the Wabi Shebelle river to Bohol Hagere in 1991. UNHCR appreciated the idea as its work had often been hampered.
Lineage groups of Abdalla Tolomogge such as the Aden Abdalla, Barer Saad, Mohammed Asse and Seleban wrote a letter to the Godey zone administration to facilitate the establishment of Adadley as a *wereda* centre for Awlihan. The transfer of Awlihan returnees into Bohol Hagere eventually led to the establishment of Adadley *wereda*. The regional government recognised Adadley as one of the seven districts of Godey zone in 1998.

### 3.2 Kebeles

Before the local elections of 2004 all the three former *wereda* administrators of Adadley were from Abdalla Tolomogge while the respective vice administrators were from Awlihan. There have been frequent changes of the *wereda* and *kebeles* administration officials. In Adadley *wereda* the Awlihan and Abdalla Tolomogge have each five election sites recognized by the regional government. An election site consists of three to five *kebeles*. Only agricultural based settlements are considered as a *kebele*. In the 2004 elections one of the Abdalla Tolomogge and five of the Awlihan inhabited *kebeles* participated in the election. On the basis of this the *wereda* parliament consisted of seven Abdalla Tolomogge members and 35 Awlihan representatives. The four Abdalla Tolomogge *kebeles* did not vote as they were refused the post of *wereda* administrator. They claim to be the majority in the *wereda*. Since the February 2004 elections the speaker of the *wereda* parliament is from Abdalla Tolomogge and the vice-speaker from Awlihan. The *wereda* administrator is from Awlihan and the vice-administrator from Abdalla Tolomogge. One salaried elder at zonal level represents Adadley *wereda* and one elder each represents the other six *weredas* of Godey zone. Two Abdalla Tolomogge and Awlihan salaried elders at *wereda* level represent Adadley *wereda*. At regional level, two Awlihan and one Abdalla Tolomogge parliamentarian represent Adadley *wereda*. At federal level Adadley *wereda* has no representation. The Awlihan also inhabit Hagere, Bare, Hargele, Dollo Ado and Imi *weredas* of the Somali region and thus two parliamentarians at federal level, Ahmed Ugas Fatule and Kamil Jamma, represent the Awlihan. On the other hand one federal parliamentarian who is also Ethiopia’s Ambassador to Yemen, Abdi Dollal Mohammed, represents the Abdalla Tolomogge. The members of parliament are chosen by the EPRDF-friendly SPDP and not by the people. In the August 2005 national and regional elections, the Abdalla Tolomogge and Awlihan had 15 and 16 election sites respectively.

### 3.3 Federal Military

There is a huge federal army presence in the Somali region and also in Godey town, yet not in Adadley *wereda*. With few exceptions military personnel stationed in the Somali region consists of soldiers originating from other parts of the country. Apart from maintaining security in the region the federal military works in close cooperation with regional, zonal and district officials and also involves in containing, and to some degree resolving, clan conflicts.
3.4 Political Parties

The existing political parties within the Somali Region are the ruling SPDP and opposition parties such as Dilwabe, Western Somali Democratic Party (WSDP, Somali Galbed) and Somali Democratic Alliance Force (SODAF). SPDP is the dominant party affiliated to the EPRDF. Dilwabe has been formed after the 2003 elections. Somali Galbed has its constituency around Jigjiga, Kebre Dehar and Wardheer. Agitation on political lines is not strong and party mobilization is weak. An elder in Godey stated that the SPDP and ONLF are controbank (involved in the issuing cheques/money, meaning mismanagement of funds) and controbandiro (working against the Ethiopian flag). The opposition parties are weak. Their voices are often ignored and undermined in the set up. They are known only by name at Godey zone level. The SPDP had been formed in 1998 through a merger between the Ethiopian Somali Democratic League (ESDL) and the moderate faction of the ONLF. At the wereda level it is difficult to clearly distinguish the roles of members of the party, administration and parliament (see also Lister 2000). Even worse, with the exception of the party and parliament these institutions hardly function. Even the regional parliament at Jigjiga rarely convened meetings in 2005.

3.5 Ethnic Federalism

With the government policy of devolution of power to the weredas in hagga 2004 Adadley wereda was not fortunate. Staff for most district offices is not in place except for three experts in the education office. The wereda agriculture and health office is without staff. The office structure has been built and is not staffed. This is attributed to low technical and human resources at regional level and the unavailability of social infrastructure in the wereda. The set up of regional states in Ethiopia on the basis of ethnically defined political representation has helped the Awlihan to establish their own wereda Adadley. However, because of the violent conflict between the two clans development has become elusive. The people are not sure as to when the next conflict will take place. Even the yearly budget that is disbursed to the wereda is shared among the cabinet members of both clans.

1 As a result of dissatisfaction with the merger some ONLF members went to the bush and started guerilla warfare blocking roads in Fiq, Deghabur, Kebre Dahar, Warder and Godey zones.
4 Pastoral Economy and Agro-pastoral System

4.1 Pastoral Economy

The Awlihan are predominantly pastoralists engaged in camel and goat husbandry while the Abdalla Tolomogge are mainly agro-pastoralists keeping cattle and small stock and practicing flood recession agriculture, pump irrigation and rain fed farming. The pastoralist Awlihan and Abdalla Tolomogge keep two kinds of herds: milking animals and dry or non-lactating animals. The milking animals consist of milking cows, small stock and camels. Women and children keep these animals within easy proximity of their camp. In most cases, each individual household keeps milking animals. Usually livestock travels about five to eight km to water points every other day. Donkeys are replacing camels for fetching water and donkey carts are used for fetching water, carrying roof thatching, firewood and grass for people living in settlements and wereda centres. Around the settlements are farmlands irrigated both with pumps and rain. Teashops and stores are found around these settlements. Figure 3 shows a schematic diagram of the settlements of Abdalla Tolomogge and Awlihan.

Adults keep the non-milking animals in distant pasture areas for about six months. Groups of households move together for security reasons. They can move to settlements sites if good pasture is available. The adults feed on the milk from the animals they tend. The chance for the herdsmen of getting food grain is small as they are in inaccessible areas. The herdsmen do not have access to food aid unless they visit settlements. Within Awlihan and Abdalla Tolomogge there are pure pastoralist communities who stay for about two to three months in a specific locality before moving with their animals to the next encampment, which may involve about half a day travel. These groups of people can keep milking animal and non-milking animals together. The non-milking animals could be hundred km away from their temporary encampment size.

Both Awlihan and Abdalla Tolomogge have dry and wet season grazing areas. The dry season grazing areas is situated along the banks of the Wabi Shebelle river and places further away from the river while the wet season grazing areas are the plains, hills, hinterlands and catchments (see Figure 3). The dry season grazing areas serve as grazing resources in times of drought periods. In severe cases of drought the Abdalla Tolomogge and Awlihan move to wherever it rains. Movement with their animals to Fiq and Afdër zones is common. Access to the Wabi Shebelle river is allowed for any group except where there are irrigation schemes. After crops are harvested access is allowed. Even though the wet and dry season grazing are designated, their access varies from year to year depending on rainfall, relations between clans, livestock diseases and other factors.

Stockowners claim that the number of livestock species kept on the range is decreasing as compared to the past 20-30 years due to frequent droughts. Even milk yield is decreasing as compared to the past. According to informants edible fruits and bushes
Pastoral Economy and Agro-pastoral System

used by people and livestock are yielding less these days. The yield from natural gum is declining as well. Some livestock experts argue that livestock numbers should be increasing as a result of interventions in livestock health. What is significant is the human population increase due to the availability of improved human health services. The population growth absorbs the increasing number of livestock and thus livestock ownership per household is minimal. The household heads continue to bequeath their animals to their sons and the sons at a later stage share animal resources with their sons.

Because of frequent occurrences of drought, pastoralists replace cattle and sheep with the more resistant camels and goats. A Somali proverb states that "when the last cattle die, the first camel starts dying" ("marka saca u danbeeya dhinto yuu neefka geela u horeeya dhintaa"). The Adadley wereda is covered with bush and shrub and even *prosopis juli flora* has started to invade the rangeland. The expansion of *prosopis* may reduce the grazing available for livestock and crop farming in the future. People may be forced to move away from areas where the tree has grown.

4.2 Agro-pastoral System

4.2.1 The Godey Farm and Settlement

The Godey Agricultural Development Project was established by the then Ministry of Interior of the Imperial Ethiopian Government in 1966. In 1971 the project was taken over by the Institute of Agricultural Research (IAR). The IAR developed 150 ha for experiments and after satisfactory trials settled 70 pastoralists on 140 ha of land. In 1976 as a result of the catastrophic drought about 1000 Somali households from Abdalla Tolomogge were settled on 1080 ha of land suitable for irrigation. Because of the Ethio-Somali war of 1977-78 the whole development programme was discontinued. At the end of the second quarter of 1981, the project was under the supervision of the council of ministers of the *Derg* regime, which resettled people from drought-affected areas of highland Wollo and Tigray. Subsequently, 3000 farmers were resettled in Godey at four settlement sites, namely Korahe, Jarar, Fafan, and Welmal. Later on the settlements were turned into producer cooperatives. At the beginning of 1982, the RRC took over Godey agricultural settlement. The settlers started growing maize as a major crop and other crops such as cowpeas, fruits and vegetables. The site of the Godey state farm is currently in Adadley *wereda*, but the state farm doesn’t function effectively nowadays.

The settlement project had continued up to 1989 and on July 8, 1989 was taken over by the Ministry of State Farms Development and officially named Godey State Farm. As a result of this move and forced resettlement, many of the highland settlers fled the area and those highlanders that stayed behind were turned into labourers for the state farm (Ayele Gebre-Mariam & Tadesse Haile 1990). After take over of government by the EPRDF in 1991 the Abdalla Tolomogge told the new government that they wanted what they considered their land back from the highland settlers and state farm. The settlers were urged by the *wereda* administration to hand over the land to Abdalla Tolomogge. The agro-pastoralist Abdalla Tolomogge started farming on the resettler’s
farms and some of the former state farms until 2001. The manager of the state farms and agro-pastoralist farms started sending motor pumps and pipes to Somalia under the pretext of maintenance, none of them were returned and the state farm’s infrastructure thereby dismantled. A total of 12 high-powered motor pumps disappeared in Somalia. Even trees planted for firewood and shade by the previous resettlement were devastated by the Abdalla Tolomogge. Now one sees traces of damaged canals, broken pipes here and there. This is a typical example of a development situation in Ethiopia when governments change. The incumbent governments do not build on or try to modify on the past but start from scratch. In this way resources are wasted and lessons are not learnt.

The abandoned state farms and the ex-resettlement farms are now covered with alien bush called *galiile* or *booco*. The bush is not consumed by livestock and has no use. Some *prosopis juliflora* (in Somali known as *birsoobis*, literally “when the stem is cut it sprouts with shoots”) is observed on the abandoned farms. Kelafo town and the surrounding farms are invaded by prosopis and it is from Kelafo that the species has spread out. After the set up of the Somali regional government, a regional government farm of 752 ha is in operation in west Godey, located 60 km from Godey town in a different locality than the previous farms. In the irrigation scheme the crops grown by the Regional Irrigation Bureau are maize and beans, vegetables such as onions, beetroot, carrot, cabbage and tomato, and fruits such as papaya, mango and guava.

4.2.2 Agro-pastoralist Farms

The Abdalla Tolomogge has commenced small-scale rain fed farming as early as the 1930s. Flood recession agriculture started also during this period. Irrigation using pumps was introduced by the then Ministry of Interior after the severe drought in 1972-74. The Awlihan started farming at a later stage than the Abdalla Tolomogge. The latter have irrigated farms using pumps and sometimes flood from the east and west side of the Wabi Shebelle river. On the western side of the Wabi Shebelle river the Abdalla Tolomogge have farms stretching from Kerker to Awro in Adadley *wereda*, while the Awlihan have farms stretching from Hidilole to the Kelafo border in Adadley *wereda*. In Godey *wereda* the Abdalla Tolomogge own farms from Gode West to the Kelafo border (see Figure 3). The Abdalla Tolomogge own about 70 pumps, mostly with one piston, while the Awlihan have 23 pumps both in Godey and Adadley *weredas*. The total land irrigated is estimated to be 1500 ha. A pump with one piston serves about 30-40 farmers, each farmer cultivating 0.5 ha. In Adadley *wereda* the Abdalla Tolomogge and Awlihan possess about 30 pumps and 23 pumps respectively, which are privately and collectively owned. The prices of a water pump with one piston, two pistons and four pistons are 9,000, 15,000 and 25,000 birr respectively and pumps are trucked as contraband goods from Somalia.

The crops cultivated by both clans along the Wabi Shebelle river are maize, vegetables such as pepper, tomato, carrot and fruits such as mango, pawpaw, guava, banana and lemon. In the hinterland sorghum and maize are cultivated using the flood of seasonal rivers or by digging small channels from the streams to the crop production areas. A limited amount of vegetables is produced.
The main activities of an agro-pastoralist household include herding, watering of animals, farming, domestic chores and supervision of all activities. At the age of five male and female members of a household start tending kids and lambs with grownup children. At a later age the male and female children help their fathers and mothers. Besides herding and farm work children and women collect gum arabic, *gum olibanum*, *oppongono* and myrrh for sale. The males are the supervisors of all activities such as herding, watering, farm work, etc. Both male and female over 60 years of age do not work except for rare supervisory responsibilities.

Entrepreneurs rent out pumps for farmers and receive 50 birr for watering half a ha of maize for one time. The maize has to be watered four times before it can be harvested. Fruits and vegetables are watered weekly and the charge is less than that of maize. Abdalla Tolomogge and Awlihan farmers form cooperatives locally referred to as *iskasheto* to collectively use water pumps that belong to individual investors. The capacity of most of the pumps is one piston. Spare parts for pumps are easily available in Godey town. The spare parts and the water pumps are mainly bought from Somalia as contraband items.

Most vegetables are planted in April and harvested in September. Vegetables are harvested two to four times a year. Fruits such as mango and lemon are planted at any period of the year. Young maize shoots are mostly sold for town people to be used as livestock feed. Some farmers sell maize stalks when their water pumps break down as well as for immediate cash needs. The stalks are used for livestock feed. Four pieces of maize plant shoots of a meter and two meters are sold for an amount between fifty cents and one birr. The average farm per household ranges from 0.5 ha to 1 ha.

Tomato, pepper and fruits are grown as cash crops and maize for fulfilling household needs. The crop residue is used for grazing livestock. The livestock dung is not used as fertilizer on the farms nor used as fuel wood as it is done in the highlands of Ethiopia. Pests such as guudiye, malabay, dihire and mudsat attack crops such as maize, beans, sorghum and also vegetables. The attack from the pests mentioned results in low and reduced crop yield, especially cereals such as maize, sorghum and peas and vegetables such as pepper and tomatoes.
5 Livelihoods and Socio–economics

Godey wereda and the weredas adjacent to it including Adadley are frequently affected by drought. As compared to other weredas Godey and its environs are situated in a lowland basin. The major droughts that have hit Ethiopia have been mostly felt in Godey and its neighbouring districts.

5.1 Drought

The major droughts of the last three decades include:

- **lafaad** (1972-74), literally meaning “white bones”
- **dabadheer** (1984-1985), meaning “extreme”
- **hurgufa** (1994)
- **shanqadha / dabagunud** (1999-2000)

Let us examine the impact of these droughts on individual pastoralists.

**Case 1**: An elder named Sirar Harad from the Fik Muuse lineage of Abdalla Tolomogge clan is now 71 years old. He owns 0.5 ha of farmland used for maize cultivation. He also cultivates tomato, pepper and pawpaw. His children at Digino locality help him to cultivate crops. Maize and the vegetables are used for home consumption. The elder has three wives and 19 children living in the outskirts of Godey town. Some of his children are married. He lives from the income he gets from his children selling water and firewood using donkey carts. Most of his children attend school and two have joined the police force. The elder is a member of the Godey wereda parliament. He used to have 140 cattle during lafaad. At the end of the drought he had 60 cattle remaining. During dabagunud, Sirar had 100 cattle and 200 sheep and goats. At end of the drought he was left with two female cattle only. In 2005 he has five cattle and does not aspire to build up his herd. He has even sold one cow after the last drought. He aspires to build up his asset of sheep and goats.

**Case 2**: During dabadheer an elder called Omar Ali used to have 100 sheep and goats, 40 cattle and remained with seven goats only. During dabagunud Omar had 157 sheep and goats and 30 cattle. After the drought he was left with 80 sheep and goats and six cattle. Now his children are working for NGOs and support him as well.

**Case 3**: Hule Saladid is aged 62 and used to have 50 cattle and 30 sheep and goats before the dabagunud drought and is now left with only two cattle.

These examples demonstrate that the pastoralists are vulnerable to drought and their life is at stake. The assets they build up in livestock are decimated by droughts. They are obliged to rebuild a herd again and again. An alternative is the gradual introduction of better farming practices and selling livestock before drought. The latter has been a
problem due to cultural obstacles as pastoralists value livestock and do not sell when they ought to. Rather most pastoralists wait until the animal dies. When the pastoralist sees the weight of the animal deteriorating then he should immediately sell. If he waits and the drought continues then he will be left with carcasses of livestock.

Except in the 1999-2000 drought period both livestock and people have perished in past droughts. During dabagunud several hundred livestock have perished, especially cattle and sheep. The drought coping mechanisms of pastoralists include moving to Somalia in search of jobs and looking for menial jobs in the locality. The most destitute households from Abdalla Tolomogge and Awlihan could move as far as Belet Weyn, Luq and Huddur in neighbouring Somalia. The other alternative available is food aid provided to the drought affected communities. Food aid is distributed after publicizing the drought internationally, often by showing dying children on television screens. International organizations such as the International Committee of the Red Cross (ICRC), the World Food Programme (WFP) and NGOs such as the Ogaden Welfare Society (OWS) or OWDA are provide food aid in Godey and Adadley districts. The government closed down OWS in 2002. Prior to this the government had been involved in restocking after the drought of 1972-74. The first restocking programme of the RRC, currently the Disaster Preparedness and Prevention Bureau (DPPB), had started in Godey. The restocking mainly focused on the provision of sheep and goats from the adjacent highlands.

Besides livestock and agricultural production other economic activities, which are important for the livelihood of the clan members are collecting and selling firewood, selling charcoal, roof thatching material, building material and water. Poor and destitute households collect firewood and grass for livestock feed at least 20-30 km away from Godey town. Roofing material and charcoal are collected 30 and 60 km away from Godey town. The charcoal producers are from all clan lineages and stay in the production sites for one week. The natural environment around Godey town has been degraded as a result of intensive use of the area for grazing, fuel wood production and deforestation for the production of construction material. During the study period a barrel of water was sold for 30 birr, a donkey cart of firewood and roof thatching material was sold for 100 birr and 150 birr respectively. A sack of charcoal was sold for 10 birr. Fetching firewood and roof thatching material takes about a two walking days roundtrip. Women are mostly involved in the retail trade of food items and clothing. The Awlihan are mostly involved in the collection and sale of gums such as myrrh, olibanum and oppoponex. They market salt collected from Afder wereda inhabited by Awlihan. All Somali groups including Rer Barre and highlanders are involved in the marketing of these commodities.

After the 2000 drought the alternative for pastoralists has become to shift towards farming and farming areas have increased as a consequence. The pastoralists clearly recognize the devastating effects that the previous droughts had on their livelihoods. Support from government and NGOs to enhance agricultural production has not been significant. Government development agents are not present and the agro-pastoralists crave to make a living by their own effort. Other sources of income such as selling firewood, water and house construction material have intensified and these items are
not available within easy proximity of Godey town. The capital city of Adadley wereda Hagere is situated 20 km from Godey town and even there firewood is not within easy reach of the village.

The arrival of the returnees from Somalia after the collapse of the Siyaad Barre regime in 1991 as resulted in resource use competition between the Awlihan and Abdalla Tolomogge clans who had mostly stayed in the Ogaden after the Ethio-Somali war of 1977-78. More Awlihan had moved to Somalia when compared to the Abdalla Tolomogge. Both Awlihan and Abdalla Tolomogge returned back to Godey at the beginning of the 1990s after the collapse of the Siyaad Barre regime. Trees and bushes around Godey town and along the Wabi Shebelle river were cut for construction and fuel wood and the area is now denuded of trees. Inhabitants of the settlements in Adadley and Godey weredas collect firewood within 10-15 minutes walk and river water 20-30 minutes walk for a one-way trip. Water and firewood is brought home on the back of women.

It is mainly teff and chat that are imported from the highlands into Godey and Adadley weredas. Chat is mainly consumed by Somalis and teff by highlanders. The bulk of the manufactured goods, clothing, canned foods, even soft drinks pass through the Somali ports and emanate from the Middle and Far East. Traces of roofing material are not visible around Godey town. A promising trend is the export of sesame to Jigjiga and Dire Dawa by airplane. Agro-pastoralists are keen to grow sesame but their knowledge is limited.

The Abdalla Tolomogge had started to establish land enclosures in the 1980s and the Awlihan in the 1990s. Enclosures for livestock feed and for farming are found around settlements by both Awlihan and Abdalla Tolomogge. This practice of increasing individual ownership of land is contrary to the traditional communal use of the land. The grass grown in the enclosures is cut and sold in markets or livestock directly fed on it. The enclosures are turned into farmland and are getting common in all Godey zone. There are enclosures for grazing purposes or for grass production as opposed to cultivation.

5.2 Flood

Floods mostly affect the low-lying areas of Imi, Kelafo and Mustahil. Godey is also affected by flood, which is caused by heavy rainfall in the highlands of Ethiopia.

The most imminent floods in Godey of the past four decades include:

- *hidigsayley*: 1965
- *soogudud*: 1966
- *kabahay*: 1978
- 2000: Right after the drought of 2000, several hundred livestock were washed away by the Wabi Shebelle river.
• "dawdle": In 2003 about 100 livestock were washed away including 119 people

• In April 2005 Godey was one of the worst affected areas and many parts of the region remained cut off. About 30,000 persons were surrounded by flood and 2000 camels and 4000 shoats had been washed away by flood. According to some people this was the worst flood in 40 years (The Ethiopian Herald, April 30, 2005).

Flood was occurring every year before the 1960s. Animal and human loss resulting from floods occurs all along the Wabi Shebelle river from Imi in the west to Mustahili in the east. The tail of the flood does not touch Ferfer as it is situated on higher ground.
6 Kinship Structure and Territory

Both Awlihan and Abdalla Tolomogge inhabit Adadley wereda while Godey wereda is inhabited by Abdalla Tolomogge (and other clans) only, but not by Awlihan. The Abdalla Tolomogge are composed of 10 main lineages, namely Barer Saad, Aden Abdalla, Mahad Abdalla, Golaade, Ashantilis, Mohammed Abdalla, Seleban Abdalla, Abdi Abdalla, Rer Kassim and Hassen Aden (See Figure 2). The Awlihan lineage predominant in Adadley wereda is the Wafete. The Wafete sub-lineages are Geeldon, Yusuf, Mumin, Bah Nab Daw Wadil and Geddid (See Figure 1) The rest of the Awlihan lineages which include Rer Afgab, Aden Kare, Hawis, Rer Ali and Sonkat inhabit Afer zone and Hargele, Bare, Cherati, Imi, and Dollo Bay (see Figures 1 and 2). The numerically smaller clans that live within Awlihan territory are the Harti, Sharif, Abdille, Makahil, Shekash and Lelkade. These smaller groups do not claim land but use the grazing and water resources of the Awlihan and live under their protection.

Urban land around Godey town and the Hagere settlement belongs to the respective municipality and is sold for birr 5.50 to 7.50 per meter square. The local municipalities sell land for building purposes to prospective house builders. Sometimes the Barer Saad lineage of the Abdalla Tolomogge sells land around Godey town. The actual land inhabited by the Abdalla Tolomogge in Adadley wereda is situated along the western bank of the Wabi Shebelle river (wabiga badhtanka) stretching from Keker to Awro and the areas north of the Godey bridge and the Hagere-Hargele road as far as close to Imi wereda, which includes localities such as Al Bereket. The Wafete (Awlihan) inhabit areas stretching from Hidilole to as far south as the Kelafo border and areas west of Bohol Hagere as far as the border to Bare and Hargele weredas. The Abdalla Tolomogge claim the whole Adadley wereda and beyond as far as Kohle, 80 km from the Godey bridge on the Godey-Hargele road. The Wafete claim territory stretching from the western part of the middle of the Wabi Shebelle river to the boundary with the Rer Afgab (Awlihan).

Some Bah Gerri informants1 said that the Hawiye from Huddur (Somalia) had pushed the Awlihan northwards as a result of which the Awlihan lost their grazing land and water points. The Awlihan in turn started to occupy Abdalla Tolomogge territory. Pastoralists normally move between wet and dry season grazing areas and if they have access to wells, they settle there and after some time they claim the land. Some of the elders interviewed assume that the Awlihan are intruders into Abdalla Tolomogge homeland. An Abdalla Tolomogge elder remarked the following “Gel jire markuu furin helo ayu furin labad daydayaa” meaning, “when the camel boy gets one bread he asks for more”. Another elder said, “Nin bogol doonaya iyo nin diidan farag weyn baad udhexeeya” meaning “one provides 100 camels to another and the other rejects”. These two allegories illustrate the difficulty of resolving the issue of land ownership between the two clans.

1 Similarly, the Rahnwein in Belet Weyn, Luq and Huddur (Somalia) are fighting against the Awlihan in the same locality over the Rabdhure wells situated on the border with Somalia. Between February and March 2005 about 18 Awlihan and 22 Rahnwein were killed in related disputes.
Let us examine the role that the lineage groups play when conflict takes place. For example, if a member of Aden Goal, belonging to Barer Saad lineage of Abdalla Tolomogge, kills a Rer Gedey (a person still belonging to Barer Saad), all the lineage groups of Aden Goal contribute blood money, which is about 100 camels or the equivalent in other livestock species. If a member of Fok Musa, belonging to Aden Goal, kills a person belonging to Aden Goal of Barer Saad lineage, Fok Musa and the rest from Harun, Umer Digod, Boho, and Ibrahim will contribute most of the animals. When the magnitude of the conflict increases then all Barer Saad and Aden Abdalla will fight each other. If a member of Farah Geldoon kills a Rer Gedey member of Abdalla Tolomogge, the Geldoon consisting of Farah, Jama, Alamagan and Aden will contribute most of the animals supported by all the five lineages of Wafete, which include, Yusuf, Mumin, Geldoon, Bah Nab Daw Wadil and Gediid. If it is a full-scale war then all Awlihan will contribute animals for blood money payment.

The territory under dispute is the whole Adadley wereda that is claimed by both clans. Each clan wants the other to move out of the wereda. The disputes that take place between Abdalla Tolomogge and Awlihan have resulted in the death of 93 people from both groups since 1947. The major issue at stake is land ownership. The conflicts were traditionally geared towards camel looting and later turned into disputing claims over land ownership since 1947. After 1947 the Awlihan started pushing into Abdalla Tolomogge territory as a result of being pushed by the Hawiye from Huddur region of neighbouring Somalia. During these conflicts the degree of involvement of both groups varied from little lineage involvement in the fight to masses of people from both clans.

Based on the genealogical chart among the Wafete (Awlihan), Kamas could marry Khayr. Among the Abdalla Tolomogge Aden Goal could marry Rer Gedey (see Figures 1 and 2). Intermarriage is practiced between Abdalla Tolomogge and Awlihan as well. Awlihan marry other clans and so do Abdalla Tolomogge. Both Abdalla Tolomogge and Awlihan marry and get married to minority groups such as Rer Barre. The cultural taboo is only against marrying Christians.
The clan is the basis of the political organization in the Somali region. Each clan has its own grazing area covered with grassland, bush, and shrub land and the corresponding lineages have their own specific areas within easy proximity. The clan grazing area is accessible for all clan members and even outsiders upon request. Such requests occur when a group or an individual pastoralist faces problems such as drought, epidemics, conflict, etc. in his locality.

Decline in the availability of fodder in terms of browse and grazing has been observed by the Awlihan and Abdalla Tolomogge pastoralists ever since the 1972-74 drought. The respondents were asked to explain the percentage decrease or increase out of 100. What came out clearly is a high reduction in the availability of most important grass and browse species (see also Jama Sugule & Walker 1998). Some grass and browse species are on the verge of extinction and few others are not available any more. Despite the decline in the availability of grass and browse species livestock numbers have increased because of animal health interventions by government and NGOs. Vaccination is regularly done and some of the major diseases such as rinderpest have been eradicated. Drugs are nowadays available as contraband items from Somalia. But the milk and meat yield from livestock have decreased.

Source: Author’s Field Survey, 2005.

To quantify change in the availability of grass and browse species informants were asked to describe change in availability in terms of percentage increase or decrease out of 100. The most important palatable grass and browse species were considered.

Land enclosures made with thorn fences are mostly present around towns and settlements. In Godey wereda about 100 households have enclosures in one locality or two. The first enclosures were established in the 1980s and there has been a tremendous growth of enclosures after 1990. Few enclosures also prevail in Adadley wereda, especially in vicinity to Bohol Hagere. The enclosed areas are individually owned and used for crop growing. Rarely cut grass is fed to livestock from the enclosures. As compared with the surrounding areas the enclosures are endowed with tall grasses and lush bush. It is common to see farmland in enclosures. The enclosures are used for grazing livestock directly during feed shortage months. Grass is also moved and fed to livestock or even sold in Hagere and Godey towns. In regard to agricultural land a member of a clan may cultivate land belonging to his clan provided it has not been farmed previously. Permission is required from the first person that initiated the farming.

Watering points are available in the form of streams and seasonal rivers in the wet season and wells and the Wabi Shebelle river in the dry season. In the same manner the clan inhabiting the area controls access to water points such as streams and rivers. Non-clan members have to ask permission to get water. Wells belong to the lineage group who dug it. But clan members have access and non-clan members will be allowed access also. Any user can access the Wabi Shebelle river. The crossing of a river implies moving animals over cultivated land to reach a river. Animals sometimes destroy the cultivated land by trampling the crops. River crossings are accessible to users as cultivation is a relatively new phenomenon and very little of the area is used for irrigation.

In Adadley wereda the number of wells (cell) and cisterns are 40 and four respectively. ICRC and OWS have rehabilitated one and three wells respectively. The wells are 0.5 to 5 meters deep. In Godey wereda the number of wells is 29, out of which two have been rehabilitated by OWDA and ICRC built three after 2000. An additional two had been built by the South-Eastern Rangeland Project (SERP) in the 1990s. In most cases the water from the wells is salty, especially from the wells towards Denan wereda. The informants in Adadley wereda declined to tell the researcher the number of water points owned by Awlihan in the wereda as they considered this a sensitive issue.
In Godey and Adadley weredas water is not a constraint for livestock production. The main constraint is grass and browsing species. The water points are not closely situated in most cases. Livestock have to be trekked long distances to water points. The coverage of cultivable land under pump irrigation is insignificant and the potential is untapped. Informants state that the rainfall has been decreasing for the last two decades, which has a negative effect on the environment. Land that used to be covered with grass is giving way to bush and shrub land. Palatable bushes are encroached by unpalatable species. The Abdalla Tolomogge and Awlihan have their own clan land with wet and dry season grazing areas, water points and farmland. Each clan allows the other to use its grazing land, water point and farm land upon request even if the two clans are in conflict with each other. Amidst the violent conflict, there is a process of cooperation and symbiosis.
8 Relations Between Abdalla Tolomogge and Awlihan

8.1 Current Practices of Customary Law (Xeer)

The traditional Somali law called *xeer* governs the Abdalla Tolomogge and Awlihan\(^1\). The *xeer* penalizes individuals or groups for inflicting any damage or harm. The penalty depends on the degree of damage caused. Let us examine some of the modalities of *xeer* that prevail in Godey and Adadley *weredas*.

If fighting (beating) takes place between two persons and one is injured on the hand, leg or other body part, the first step to be taken is treating the wound with medicine and food at the expense of the culprit. The wrongdoer gives two camels, one for the injured and another slaughtered for the elders arbitrating the dispute. If two brothers from the same family fight each other an animal, be it a fat camel or cattle or small stock belonging to the wrongdoer, will be slaughtered for the arbitrating elders who number between two and ten. The wrongdoer and the injured share the meat together. Another possible penalty is that the wrongdoer is tied by a rope and beaten by a stick while the injured observes the act. If a person touches the breast of a girl, the penalty is one gun to the girl’s family. An incidence related to someone touching the breast of a girl has resulted in a fight where 17 were killed among the Abdalla Tolomogge. This happened many years ago. If a person rapes a girl, he has to pay three she-camels of three to four years of age as a penalty to the girl’s family. If an individual insults another person, the penalty is birr 500 or the equivalent in Somali Shilling. A head of sheep or goat is slaughtered for the elders belonging to both groups arbitrating the conflict. A small sum of money is returned to the culprit as well. Religious abuse (insulting one’s religion) is a very sensitive issue. The culprit is taken to *sharia* court and is obliged to pay birr 100-300 to the victim. Similarly, in the case someone has insulted one’s mother the elders from both families pass a penalty of birr 100-300.

Conflicts are a frequent phenomenon and are usually contained and managed within the cultural set up. After elders resolve a conflict, they appear in the *wereda* court and inform the court members about the conflict resolution modalities and the case is recorded accordingly. All major cases managed by elders are documented in written by the courts. The *diya* (blood compensation) regulation for killing shall be dealt with in Chapter 10. Unlike other parts of the Somali region there is no *xeer* preventing the cutting of trees. Even gallery forest along the Wabi Shebelle river is thus devastated.

---

\(^1\) At El Bereket, a woman was trying to beat a man with a stick. She was throwing stones into a tea shop where the author was holding a focus group discussion (March 2005). The man she was after was a participant of the focus group. Some adults struggled to stop her from approaching the man. What had happened was that the man had beaten her son and broken his tooth. Compensation had to be paid in terms of a two year old heifer. The guilty and the victim both belong to the Rer Godey lineage of Barer Saad secondary lineage of Abdalla Tolomogge. The compensation to be paid is small as both belong to minor lineage/jilib.
8.2 Relation Between Abdalla Tolomogge and Awlihan: Symbiosis and Cooperation

The relation between Abdalla Tolomogge and Awlihan shall in a first moment be explained in terms of cooperation and symbiosis. Except during times of intensive conflict, which usually take place during a couple of days only, cooperation between Awlihan and Abdalla Tolomogge continues. One depends on the other for livelihood and existence and exchange relations animate cooperation. The Awlihan sell their produce such as livestock and livestock derived products, salt and gum to the Abdalla Tolomogge. The Abdalla Tolomogge in turn sell these products to consumers and traders. These resources are available in Awlihan land such as Bare, Hargele and Cherati woredas. The Awlihan also sell firewood, grass for livestock feed and roof thatching material to the Abdalla Tolomogge and other clans in Godey town. On the other hand the Abdalla Tolomogge sell manufactured goods, shoes, grain, *chat*, consumer goods (sugar, tea), which they get from Somalia and the Ethiopian highland to Awlihan. Hagere village is newly established and needs services from Godey town. Let us examine a case study, which gives an impression of the historical symbiosis between Abdalla Tolomogge and Awlihan.

**Case 4:** Ahmed Aden, aged 78, belongs to the Mohammed Abdalla lineage of Abdalla Tolomogge and has two wives. He has four children from the first wife and five children from his second wife. At Agewein, south of Godey town, he cultivates 0.5 ha of land using irrigation together with some Wafete lineage group members. In terms of livestock he owns two cattle and 100 shoats. Since his brother is aged he expects his uncle to marry his wives after his death. For marrying the first wife he had paid a bride price (*yarad*) of seven cattle and 100 sheep and goats and only six cattle for his second wife. Mohammed’s lineage group has not been in conflict with the Wafete. It has a history of living together with the Awlihan.

When any of the clans move to other territory beyond what is currently occupied, the migrants ask permission for grazing and water and they are granted access even if the relation between them is tense. The only precondition is that the permission is temporary.

Marriage is practiced between some lineages of Abdalla Tolomogge and Wafete of Awlihan. The Mahad Abdalla from Abdalla Tolomogge lineage marries the Wafete and vice versa. Rer Wa’ays of Wafete marries Rer Gedey of Abdalla Tolomogge and vice versa. An elder named Kelile Abdi reiterated that the Wafete and Abdalla Tolomogge are brothers and live together in settlement. Another Abdalla Tolomogge elder remarked that when the 1986 conflict took place between Abdalla Tolomogge and

---

1 The Hawiye in Kelafo buy pumps from Somalia and Rer Bare provide the land and both benefit from growing crops. This symbiotic relation but not equal relation is also ascertained when the Owdak chase the Rer Bare from Kelafo during the EPRDF takeover. With the Hawiye support the Rer Bare managed to get back their land.

2 The *yarad* varies from clan to clan and through time a case is recorded where some one paid 100 shoats, 10 camels and one rifle. The *yarad* among Awlihan is currently 10 cattle, 5 camels and one rifle.
Awlihan, “the adults you see here lost their fathers during the Biyoloow war. But a few of our lineages members have Abdalla Tolomogge wives”. He continued and said, “We want to live in peace and harmony”. Among other dwellers traders belonging to Abdalla Tolomogge, Abdille, Bah Gerri, Awlihan etc. inhabit Godey town. The Awlihan traders in Godey town are always in contact with Abdalla Tolomogge traders and community members and thus bridge the gap between Abdalla Tolomogge and Awlihan clans. During the Ethio-Somali wars of 1962-63 and 1977-78 the Abdalla Tolomogge and Awlihan joined hands to fight the Ethiopian army. This behaviour is consistent with the segmentary character of the Somali clans and the process of fusion and fission between and among the clan lineages.

8.3 Relation Between Awlihan and Abdalla Tolomogge: Land Conflict

Between approximately 1900 and 1947 several conflict incidents involving Abdalla Tolomogge and Awlihan took place. They were caused by the looting of livestock, especially camels. Elders from both groups can recall some of these conflicts that evolved at a small scale. Camel looting has been common among the Ogaden clans such as the Mohammed Zuber, Bah Gerri and Rer Isaak. Apart from the conflict between Abdalla Tolomogge and Awlihan, conflicts also take place between the Abdalla Tolomogge clan lineages1.

The following section concentrates on and recounts the major land conflict between Abdalla Tolomogge and Awlihan. In 1947 at a place called Ane, north of Godey town, there was a conflict between Abdalla Tolomogge and Awlihan and one person from Wa’ays of Awlihan was killed. During the same year the Wabi Shebelle river was flooded and the plain (banka) was filled with water and the Abdalla had cultivated maize using the flood recession. The Awlihan wanted to put this land under their control. At Bokol Bar an incidence took place in which four Abdalla Tolomogge belonging to Aden Abdalla and two Awlihan belonging to Wa'ays were killed. All these killings took place in the gu season2.

In 1949 the Abdalla Tolomogge raided the Awlihan to capture some livestock at Gerba Baquaqdha in hagga season. In the process 14 Awlihan and another 20 Abdalla Tolomogge were killed. Several others from both groups were wounded. The government did not interfere to stop the fighting and this conflict remained unresolved. In the same year at a place called Dhanawe during gu season the Abdalla Tolomogge killed six Awlihan and the number of deaths from both groups was thus levelled.

There was no conflict over land that informants could recall in the period between 1947 and 1986. In 1986 the Awlihan asked the Abdalla Tolomogge to move east of the Wabi Shebelle river. While negotiations between the two were ongoing some Awlihan grazed

1 The conflict between Hassen Aden and Rer Kassim is the result of Rer Kassim claiming land that is cultivated by Hassen Aden. All the secondary lineages of both groups are involved in the fighting. Another case of conflict is between Abdi Abdalla and Hassen Aden over the water wells between Dennan and Imi. There is no conflict recorded within the Wafete secondary lineage.

2 The seasons are mentioned with the aim of linking seasons and outbreak of conflict.
the crop fields of Abdalla Tolomogge. The farms were rain fed and situated far away from the river. The Abdalla Tolomogge killed four persons from the Geldoon lineage (Wafete of Awlihan) in revenge and within a week another nine persons were killed. About 100 camels, 30 sheep and goats and 3 cattle were also killed by bullets. The conflict took place at a place called Biyoolow and lasted for three months during which a total of 67 Awlihan and 66 Abdalla Tolomogge were killed. Scores were wounded from both sides. According to Awlihan informants the latter chased the Abdalla Tolomogge beyond the Wabi Shebelle river. On the other hand the Abdalla Tolomogge informants remarked that they chased the Awlihan to the hills and mountains, west of Godey. One of the Abdalla Tolomogge elders, currently advisor to the wereda administration, Sirar Abdi Harad had his two sons killed in the 1986 fighting.

In 1991 Aden Abdalla belonging to Abdalla Otology killed the brother of the current Adadley wereda administrator who belongs to Wa’ays of Wafete (Awlihan). The killing took place in Godey town during the hagga period. The Abdalla Tolomogge paid the compensation for the first phase of the blood money payment, ages (one camel) and kafan (white cloth for covering the dead body), yet discontinued paying the rest. The immediate cause of the conflict according to Awlihan elders was hate at interpersonal level. An Awlihan elder remarked “umal yahaas loo kabo yaa biyo loo tantoomaa” which means “the anger you have for the crocodile makes you beat the water”. This means he was killed for no reason other than hate.

After the collapse of the Siyaad Barre regime, many returnees including Awlihan and Abdalla Tolomogge came to Godey and were provided with relief food by UNHCR and DPPC. The Awlihan and Abdalla Tolomogge started fighting against each other and the UNHCR and NGOs found it difficult to continue the provision of food to the internally displaced people. The Awlihan were of the opinion that the Abdalla Tolomogge were cultivating their land across the Wabi Shebelle river. To curb the conflict Ugas Abdirahman of Abdalla Tolomogge moved the Awlihan to Bohol Hagere in 1995 despite protest by the elders of Abdalla Tolomogge. The ugas made this concession in order to stop the fighting between Abdalla Tolomogge and Awlihan.

In 1991 EPRDF took over power in Ethiopia and the Abdalla Tolomogge claimed ownership of the land cultivated by the 3000 settlers west of the Godey bridge. The Abdalla Tolomogge claimed the land now because they did not dare to do so during the Derg period. The settlers were told by the wereda officials to move to other areas within Godey wereda. The settlers did not agree and left to their home areas. The administrator of Godey wereda Merrad Layle, Godey zonal administrator Dulguf Meshekoke and Ugas Abdirahman, all belonging to Abdalla Tolomogge clan, after a short meeting and swearing in the name of Allah gave the land formerly cultivated by the highland settlers to Abdalla Tolomogge in 1991. The Awlihan were not involved in this meeting and did not agree on the decision and conflict flared up at a farm place called Godere (in hagga season). Two persons from the Rer Gedey lineages of Abdalla Tolomogge were wounded, one by bullet and another by stick. None were wounded from the Awlihan side. Awlihan elders claimed that they don’t know who initiated the conflict and that even after asking participants of the conflict they were unable to identify the culprits.
Subsequently, traditional elders from the two sides, Godey *wereda* officials, Godey zone officials and members of the federal military sat together for several days to resolve the conflict. Awlihan paid compensation for the one person wounded by gunshot, the equivalent to the cost of one camel. Compensation for the person wounded by stick was not paid. The land issue was not discussed. As soon as government officials are involved in resolving land disputes, they tell people that land belongs to the government and that local communities can claim usufruct user rights only. The participants were only eager to look at the immediate cause of the conflict.

During this period Abdalla Tolomogge and Awlihan refugees were fighting each other in Huddur, Somalia. The militias of Abdalla Tolomogge killed 12 Awlihan and the Awihan killed 12 Abdalla Tolomogge. Clan leaders and elders in Mogadishu initiated mediation and consultation and an agreement was reached between the two clans to live together in peace. Between 1991 and 2003 conditions remained tense between Abdalla Tolomogge and Awlihan but there was no significant fighting elders could recall.

In 2003, Abdalla Tolomogge at a place known as Higilo in Adadley *wereda* killed two persons belonging to Bah Nab Daw Wadal of Wafete (Awlihan). Another person was also wounded by a person from Rer Gedey lineage of Barer Saad (Abdalla Tolomogge). The military played the role of peacekeepers and placed themselves between the two clans. Many people were arrested and the soldiers captured animals for some time until security was restored. Peace negotiations were carried out during nine days. The immediate cause of the conflict had been a quarrel between individuals over a piece of farmland. To identify the killers, witnesses swore by the holy Qoran. The aggrieved party and the killer swear in the presence of elders before embarking on conflict resolution process. They ask Allah to lead them in the right direction and help them pass the right verdict.

The pressure from the *wereda* administration, zonal officials and federal military forced the Abdalla Tolomogge to pay the blood compensation within 60 days. The *ugases* of Abdalla Tolomogge and Awlihan were involved in the negotiation. Five salaried elders (*lateliye*) and five other bush elders from Abdalla Tolomogge and one salaried elder and five other bush elders from Awlihan participated in the meeting. In this kind of emergency situation, the Abdalla Tolomogge mobilized their resources and bought 200 four-year-old camels from the Godey market and handed them over as blood money compensation. The Abdalla Tolomogge had to make an announcement to other clans to bring their camels to the Godey market for sale. Camels were bought from Godey market at birr 1500 per camel. The close families Waya’as of Bah Nab Daw Wadal received 60 camels and the remaining 140 were shared among the members of the four Wafete lineages. The elders of Awlihan received one gun each. The traditional procedure of blood money payment was not followed fully as the government officials were actively involved in the conflict resolution process. The government officials including the military gave more weight to modern conflict resolution mechanisms. The military has a lot of weight in the meetings and emphasis is thus given to formal government structures rather than traditional institutions. All parties signed the compensation agreement including elders from both groups, the injured, guilty, *wereda*
officials, zonal officials and federal military. The president of the region was on another mission and was invited to attend the closing meeting (see Annex 1).

8.4 Details of Blood Money Compensation

Among the lineages of Awlihan when blood money is paid for murder a total of 44 camels are paid for a man and 22 camels for a woman. The blood money is 100 camels when Awlihan kill non-Awlihan. The payment for blood money also depends on the season. Payment in the dry season or drought period may be difficult due to the difficulty of collecting compensation from the concerned parties. If the livestock are in poor condition and the number of animals to be paid is high, payment is deferred to a later period. The procedures for payment are as follows:

Within Awlihan:

* Ages: one fat male or female camel

* Kafan: white cloth to cover the dead body, a rifle and Birr 500. After these steps are fulfilled, the following are paid:

* Rafise: 11 female camels of 6-7 years of age

* Warantiirs: 24 camels of 4 years of age

* Magdheer: 8 male or female camels

The payment is done in camels or its equivalent. The exchange rate is as follows (1 camel = 3 cattle, 1 camel = 40 shoats, 1 cattle = 20 shoats).

Let us see how the blood money to be paid is distributed among the lineage member. If a member of Awlihan from the lineage of Bah Nab Daw Wadal kills someone outside his clan the payment modalities are as follows; 30 camels are contributed by close family members, 40 camels by Gawsoole, and 20 camels by Waays and 10 camels by the four lineages of Awlihan which include Geeldoon, Mumin, Yusuf and Gediid. Elders arbitrating conflicts also receive animals. If the number of death is many then camels from all clan members are collected.

Within Abdalla Tolomogge:

A camel is slaughtered for the elders arbitrating the dispute.

* Ages: one big male or female camel

* Kafan: birr 500

* Rafise: 10 camels (used to be milking camels in the past) of any age
Magdheer: 90 camels of four years of age

The duration of payment depends on the quality of available grazing and ranges from one to 12 months between the first and the last phase of blood payment. In the case of Abdalla Tolomogge the blood money is 100 camels for a man and 50 camels for a woman. Sometimes a woman is given to the other party instead of 50 camels in order to create an alliance through intermarriage between the groups in dispute.

What came out clearly from the conflicts between Abdalla Tolomogge and Awlihan (1947-2003) was that blood money was not paid as the tradition requires and conflicts were not resolved. Other Ogaden clan lineages such as Makahil, Abdille and Rer Isaak have tried to bring the Awlihan and Abdalla Tolomogge together to peacefully discuss their conflict, but they failed to do so. Thus retaliation followed upon retaliation between Awlihan and Abdalla Tolomogge. The Awlihan still claim blood money for the deceased brother of the current administrator of Adadley wereda. Now the Awlihan intend to raise this issue with the elders of Abdalla Tolomogge, wereda officials, zonal officials and federal military.

Other clan members such as Bah Gerri refer to the Awlihan, both those in Ethiopia and those in neighbouring Somalia, as more pastoralist, aggressive and hostile than Abdalla Tolomogge and accuse them of encroaching on other territories in search of water and grazing. The agro-pastoralist Abdalla Tolomogge are more inclined to settle permanently and to engage in agro-pastoralism. Pastoralists like Awlihan move with their animals to long distance pastures, browse and water points and establish semi-permanent settlements. Even then they push further to have better grazing and water points. This movement is typical of nomadic Somalis’ predatory expansion. In the course of the movement, they encroach on the territory of other clans such as Abdalla Tolomogge, which results in confrontation and conflict. Pastoralists such as Awlihan often encroach on an area first and later claim that the land belongs to them. Nowadays one observes Somali pastoralists pushing the Arsi, Borena, Afar and Oromos into the Harar highlands. Unless the conflict between Abdalla Tolomogge and Awlihan is resolved, a bloody war is inevitable between the two contesting groups when government changes and an institutional vacuum occur.

The conflicts between Abdalla Tolomogge and Awlihan took place mostly in hagga and to a certain extent in gu season. The conflict cases did not take place in stress period like jilaal season. Women and children under 18 did not involve and were not attacked during the conflicts between Awlihan and Abdalla Tolomogge. An exceptional case is during the Biyoolow war in 1986 when many lives were lost and women and children from both clans were killed.

The wereda administration consults the elders on issues of conflict but not always. Elders often reiterate “Nin yar in tuu geed ke boodo ayuu talona keboodas” meaning “a person who jumps a tree thinks he can forget other people’s ideas”. Elders tend to think that the young people take quick action without considering the experienced elders. Finally, in regard to the role of government offices in conflict resolution, the wereda and zonal officials exacerbate the conflicts, as has been the case in Godey and Adadley weredas. The Godey zonal officials are mostly drawn from Abdalla Tolomogge, but
include a number of other clan representatives from each of the zone’s weredas. The Godey wereda officials are Abdalla Tolomogge only while the Adadley wereda officials are both from Awlihan and Abdalla Tolomogge.

8.5 External Factors Exacerbating the Conflicts

External factors, which influence the above-described conflict, include insecurity, civil war in Somalia, federal intervention and clannishness. The ONLF, which draws support from the Mohammed Zuber, Bah Gerri, Makahil and Otology clans excluding Awlihan, operates in Fiq, Korahe, Warder, Deghabur and Godey zones, especially in Denan and Imi weredas. The movement of outsiders (non-Somali, also sometimes non-Ogadeni, for example Isaaq) in these zones is hampered. Some Al-Ittihad groups (Islamic fundamentalists) seem to operate in Fiq zone and the security situation has been deteriorating recently. The two movements are creating instability in the region and thus the flow of traffic and goods between Godey, Hagere and Jigjiga is hampered unless military convoy escort trucks.

Since 1991 neighbouring Somalia has been without a central government and instability has resulted in arms proliferation and a flourishing contraband trade in the Somali region of Ethiopia. Insurgent groups such as ONLF and Al-Ittihad have acquired their training in Somalia and infiltrated into Ethiopia. Political disorder in Somalia increased the availability of automatic weapons and as a consequence AK-47 rifles are abundantly available in the Somali region. Many Abdalla Tolomogge actively involve in ONLF and comparatively only few Awlihan. EPRDF cadres in the government structure indirectly control the regional administration. The representatives of the regional government in most cases have not provided solutions or have not taken action on pertinent issues in the Somali region.

“Clannishness” is predominant in the Somali region and results in competition over scarce resources and civil servant positions. The location where public infrastructure is built in Somali region depends mostly on where the president of the region comes from. A case in point is the hospital in Cherati or the boarding school in Shekosh. High officials at regional level who facilitated the establishment of the infrastructure represented these two districts. Hargele where the hospital is built is situated in an inaccessible location without facilities such as water or electricity. Some elders say that a start should have been made with the establishment of a health centre. Shekosh is a wereda with no facilities such as road, water or electricity. From a development perspective it is necessary to establish criteria for using the regional budget rather than share it on a clan basis.
9 Concluding Remarks and Recommendations

9.1 Concluding Remarks

Abdalla Tolomogge and Awlihan elders have tried to mediate the conflict between the two groups by shuttling between Bohol Hagere and Godey. Some of the authors’ key informants have been involved in the conflict as mediators. Awlihan elders say that the Abdalla Tolomogge should move to the eastern side of the Wabi Shebelle river and that they should return their land to Awlihan. They also state that the Abdalla Tolomogge can use their land but cannot claim ownership over it. A final meeting between the two groups had been concluded with a prayer. The Abdalla Tolomogge say they want to share land resources with the Awlihan and have more decision making power at Adadley wereda level and live together with Awlihan. On the other hand, the deputy wereda administrator of Godey, regional parliament members of Awlihan and the regional parliament members of Abdalla Tolomogge reiterated that the two clans should live in peace and harmony. They all stressed that there is no alternative to peaceful co-existence.

The following section briefly recapitulates the major finding of this study:

- Godey, Adadley and the surrounding weredas are more often devastated by drought when compared to other weredas in Somali region. The name Godey means “lowland” when compared to the surrounding areas.

- With the introduction of land enclosures in the 1990s, Adadley wereda and the surrounding weredas started to transform their communal grazing land into semi-private land holdings. In the long run this may erode the use of communal grazing land in a society where land is communally and livestock individually owned.

- The environment has been made vulnerable and fragile due to the exploitation of natural resources for firewood and building material. The returnees from Somalia have damaged natural resources and the environment. There is no traditional xeer that protects the environment.

- Elders aggravate conflicts and beat drums. When it comes to the ordinary pastoralists they are not much worried as to whom the land belongs to as long as they have access to grazing, farm land and water. The role of the wereda administrators is similar to elders who prefer turmoil in order to create recognition for themselves, thereby staying in power longer. The elders and wereda administrators of Abdalla Tolomogge and Awlihan want to live in peace. Members of Barer Saad and Aden Abdalla of Abdalla Tolomogge are always saying, “let us live in peace with Awlihan”. They seem to cherish good relationship with the Awlihan.
• The blood money compensation has not been paid after the conflicts and thus conflict continued escalating between Awlihan and Abdalla Tolomogge. The blood money is 100 camels for both Abdalla Tolomogge and Awlihan when they incur violent conflicts with outsiders. With the lineages of Awlihan the blood money is 44 camels and that of Abdalla Tolomogge 100 camels.

• The Awlihan have a more pastoralist lifestyle than the Abdalla Tolomogge and encroach on other territories in search of water and grazing. The more agro-pastoralist Abdalla Tolomogge are inclined to settle in permanent settlements to practice agro-pastoralism.

• Pastoralists like Awlihan move with their animals to long distance pastures, browse and water points and establish semi-permanent settlements. In the course of the movement, they encroach on the territory of other clans such as Abdalla Tolomogge, which results in confrontation and violent conflict. Nowadays one observes Somali pastoralists pushing the Arsi, Borena, Afar and Oromos into the Harar highlands.

• The conflicts between Abdalla Tolomogge and Awlihan from 1947-2003 took place mostly in *hagga* season and to a certain extent in *gu* season. The conflicts did not take place in stress periods like the long dry season (*jilaal*).

• Women and children under 18 years of age were not involved in past conflicts between Abdalla Tolomogge and Awlihan. An exceptional case is the Biyooolow war of 1986 when all members of the household including women and children less than 18 years of age from both clans were affected by the fighting.

• The Abdalla Tolomogge and Awlihan have their own clan land with wet and dry season grazing areas, water points and farmland. Each clan allows the other to use its grazing land, water point and farm land upon request even if the two clans are at conflict against each other. Amidst the violent conflict, there is a process of cooperation and symbiosis.

• Awlihan are practicing predatory expansion and encroaching on Abdalla Tolomogge land since 1990s. The Awlihan formerly inhabited the area known as El Berdey in Somalia. When the Hawiye from Somalia pushed them northwards, they in return pushed the Abdalla Tolomogge. The Awlihan ended up in what is formerly Abdalla Tolomogge land. In the same way the Gerri, Merrihan and Degodia took over what is known as Borena land and pushed the Borena into the highlands. The Abdalla Tolomogge encountered a similar fate.

• Ethnic federalism enhanced the Awlihan to form a new *wereda*, Adadley and thus to gain a better political position in Godey zone than before. But still Adadley is not fully controlled by Awlihan, as they have to share power with Abdalla Tolomogge. There is disagreement between the two on power sharing in the district.
• The wereda sector offices are below capacity, below what is proposed under the current decentralization programme in terms of staff and resources. The community is not receiving technical services in agriculture, human and livestock health, water, etc. as compared to Godey wereda and thus conflict is inevitable.

• A census has not been carried out to inform the population on the basis of a demographically based power sharing arrangement between Abdalla Tolomogge and Awlihan. Both groups complain of not being fairly represented at the wereda and higher administrative levels.

9.2 Discussion of Hypotheses

On the basis of the author’s assessment the validity of the three hypotheses presented in chapter 2.2 is as follows:

Hypothesis 1: Conflict transformation is enabled through the inclusion and participation of stakeholders who are not directly involved in violent disputes over natural resources.

The hypothesis holds true for the case study. Abdalla Tolomogge and Awlihan, prior to the involvement of different stakeholders (wereda, zone, federal military) the conflicts were not resolved nor at least contained. The rudimentary conflict resolution mechanism in place is balancing the number of death from both sides. With the involvement of different stakeholders blood money was paid to the deceased family, lineage group and clan for the first time in the history of the conflict between Abdalla Tolomogge and Awlihan. This happened in 2003 when Abdalla Tolomogge had to pay blood compensation numbering 200 camels for the killing of two members of Awlihan. The involvement of the elders, military, district and zonal administrators was instrumental in the conflict resolution.

Hypothesis 2: The integration of customary and modern procedures and institutions for conflict and resource management is an effective conflict transformation strategy.

This hypothesis holds true for the case study with regard to conflict management. The state procedures only facilitated the blood money payment in a kind of emergency situation with shorter periods than normally done. Except forcing the Abdalla Tolomogge to pay in the traditional way, the land issue was not addressed and discussed. Only the traditional conflict resolution mechanism in terms of blood money payment is enforced.

Hypothesis 3: Violent multiple resource user conflicts are settled through the exchange of differentiated bundles of property rights for diverse users in space and time.

This hypothesis is not relevant for the case study where resource disputes are not resolved on the basis of differentiated bundles of property rights, but rather by dividing land among disputants. The core issue of the conflict between Abdalla Tolomogge and Awlihan, which revolves over the ownership of land primarily, and political position in the administrative structure on secondary level, has not been resolved. The latter seems
partly resolved as both groups are represented at wereda and regional parliament level. The land ownership issue has not been discussed.

9.3 Recommendations

- Training on conflict prevention management and resolution to elders, wereda and zonal officials who involve in conflict resolution should be conducted. The idea is to inject new conflict resolution mechanisms into old practices and thus to pave the way for the future. Avenues for the harmonization of traditional and modern conflict resolution mechanisms should be explored.

- Improved farming technology and skills for farmers need to be enhanced. There should be effective extension services to teach farmers the basic knowledge of crop production. The market infrastructure needs to be developed and different water harvesting technologies should be introduced.

- Soil and water conservation by the community should be enhanced in order to reduce soil erosion and environmental degradation.

- The introduction of agro-forestry activities in Adadley wereda and Godey zone in general in order to reduce the distance town people travel to fetch fire wood and building material as well as to rehabilitate the environment is indispensable.

- Awareness should be built among the community so that farmers are able to control pests and diseases that curtail crop production.

- Training is required for community-based animal health workers and mobile human health workers. A lot of effort is required in order for mobile health and education services to work. Agro-pastoralists need to be exposed to extension education.

- There is a need to organize a workshop for elders, wereda administrators, and wereda cabinet members to discuss the burning issue of land ownership and power sharing arrangement and to come up with solutions. The president and vice president of the region may participate in this meeting provided they do not belong to any of the two clans. The meeting should be held in Bohol Hagere. This approach may be better than simply passing decisions at zonal or regional levels. The idea behind this workshop is to create harmony between the clans so that they live in peace and share the water and land resources.

- In view of more appropriate power sharing arrangement a population census should be carried out in Adadley wereda by an external, neutral body. The proportion for representation could be devised on the result of such a census.

- A Somali proverb states: “Hal boliya nerig halala medelesso”. If a camel is bad (haram) its offspring will be the same. The jest of the matter is that if the problem is not resolved now the future may be bleak.

Annex

Annex 1: Translation of the Conflict Resolution Agreement between Abdalla Tolomogge and Awlihan Followed by a Transcription of the Original Agreement (in Somali)

Somali Regional State

To whom it may concern

Sub-peace agreement

The conflict was between the two brothers Abdalla Tolomogge and Awlihan. As a result of the conflict, many people lost their lives, rights, democracy and development. In the process the lives of innocent people were lost and also properties were destroyed.

During this conflict two persons were killed from Wafate/Awlihan and the killers were Barer Saad/Abdalla Tolomogge. The elders on both sides agreed to resolve the conflict. Elders of both clans, the Godey zonal administration and the federal military were involved in mediating the conflict and agreed on the following:

Points of agreements

The points of agreements are as follows:

1. Both lineages should solve the problem peacefully.
2. The Awlihan side should receive their blood money for the two members killed.
3. Abdalla Tolomogge should pay the blood money as soon as possible.

How to pay the blood money

1. For each dead body 100 female camels of 4 years old should be paid.
2. The *rafise* should be paid within 10 days and the rest of the blood money in 30 days starting from 28/10/96 (Eth. calendar).
3. The lineage group who lost the two people should forget what has happened their people and should receive their blood money peacefully.
4. The killer side of Abdalla Tolomogge must pay the blood money within 30 days.

Resolution passed

The zonal administration, representative of the military and the regional Bureau agreed on the following:
1. The agreement should be implemented within the time frame set up.

2. Any side who violates the agreement will pay a penalty of Birr 50,000.

3. The government must make sure that the agreement is fulfilled.

4. Starting from this, the blood money for a person killed from either side is 100 camels of 4 years of age for a man or 50 for a woman.

**Outcome of the agreement**

1. Based on the points discussed above, both clans have taken the responsibility for security of the area/wereda.

2. Even though it has been difficult for the Abdalla Tolomogge side to pay the blood money, finally 200 camels of 4 years of age were mobilized for payment.

**Conclusion of the agreement**

The elders of Abdalla Tolomogge and Awlihan have agreed on the following:

1. Both Abdalla Tolomogge and Awlihan should work for peace and security of the wereda.

2. From now onwards the blood money payment is 100 camel for a man killed and should be paid in two months time.

3. Starting now in addition to blood money there will be a financial penalty of Birr 50,000.

4. Any of the clans men engaged in instigating insecurity or steal animals from another, the penalty in terms of finance is birr 10,000.

5. In order to maintain peace the agreement should be maintained and all outstanding issues should be handled peacefully and in democracy principles.

KU: - Cidji ay khusayso

Ujeedo: - Heshiis nabagaliyo

Khilaafkii soo jireenka ahaa ee ku saabsanayn Degmada cadaadle una dhaxeyay beelaha walaalaha ah ee aagaas ku wada nool ee cabdalle-tolomoge iyo cawlyahan wuxuu keenay in ay shacabku waayaan xuquuqdoon nabad galyo, dimuqraddyad, iyo horumarba.

Dhibaatooyinka waxay galaafteen nolasha dad aan waxba galabsan waxaana ku dhumay hanti badan.

Dhibaatooyinkaan waxay dhibaatooyinkii aan soo sheegnay waxaa oogu danbeeyay geeridii naxdintahayd allah ha unaxarisisee ee kutimid labadii nin ee katirsanayn beesha cawlyahan kaar ahaan beel hooaadka reer waafatay dilka labadaasi nina waxuu kayimida beesha cabdalle-tolomoge kaar ahaan beesha bah reer sacad.

Hadaba si amaanka loosugoo dhibkii dhaacayna loo xaliyo waxay labada beelood isla gaadheen heshiis ay kasoo shaqeeyeen odayaal dhax dhaxaad ah, ugaasayda labada beelood, goobjoogna ka ahaayeena maamulka gobolka iyo wakiiyada ciidanka fadaalka.

Qodobaddii Hesiisikan

Qodobaddii heshiisikan oo labada beelood isla qaateen waxaa kamid ahaa:-

1- Inay labada beelood khilaafkoc nabad galya ah ku dhameeyooyinka

2- Inay beesha cawlyahan qaataan magta labadii nin ee ka dhimatay

3- Inay beesha cabdalle tolooge sida oogu dhakhsaha badan waafaqan bee xad dheerka la loo dhaqay kubixiyana magta.

Sliurutidaha Magata

1- magtu inaynocoto ninkasta 100 (boqol neef oo geel dliadig ah)oo dhamaantoo afar jir ah.

2- in magta rabisaha ah lafuu bixiyi bari gudahood magta oo dhana lagu dhamaystiro modo 30 (sodon maalmood ah) oo kabilalabanaysay 28/10/96 (labataan iyo sideeddi bishii tobaan sagaashan iyo lix)

3- in beesha waxlaga diliy kusabraan dhibka gaadhay si nabad galiyo ahna magta uqaataan

4- in beesha dilku kayimida magtu ku dhamays tiraan mudada loo qabtay.
Goaankii goobjoogayaasha

Goaankii goobjoogayaashii heshiiskaas av ee beeluhu wada galeen oo sidaan horayba soo sheegnaa ka koobnaa odayaasha beelaha dhax dhaxaadka ah, maamulka gobolka, wakiilada ciidanka fadaralka iyo maasuuulintii kasocotay Xafiiska Maamulka DDS waxay isla qaateen qodobadan ay kuxoojinayaan heshiiska ay beeluhu kala qorteen.

1- in heshiiskaas lagu dhaqan galiyo mudada loo qabtay
2- in laga qaado talaboo sharci ah oo ogal magaalada heshiiskaas jabisa laguna ganaaxo hanti lacageed oo dhan 50,000 (konton kun oo Bin-).
3- In ay dawladu lawareegto fulinta heshiiskan
4- Heshiiskan iyo wixii kadanbeeya labada beelood waxaa xeer u ah wixii dil ah ee cukala yimaada dhinaca raga 100 neef oo geel dhadig ah da dooduna tahay 4jir,

Natiijada heshiiska

1- ayagoo kusalaynaya dhamaan qodobadaan kor kusoo xusnay labada beelood waxay ku guulaysteenn inay amaanka sugaan kana hortagaan wixii nabad galyada khalkhal gali karay,
2- in kastoo dib uduhacyo dhinaca wakhtiga ah yimaadeen duruufu jiray awgeed beeshii magta laga rabay oo ahayd cabdalle tolomoge waxay siyeyn beeshii cawlyahan ee labada nin lagadilay 200 (labo boqol oo neef oo geel dhadig ah) da dooduna tahay 4 afar sano.

Gaba gabada heshiiska

Odayaasha beelaha cawlyahan iyo cabdalle tolomoge waxay kama danbaystii ku heshiyyeen qodobadan:-

1- in labda beelood kawada shaqeeyaayn sugida nabdghalyada daggama si wada jir ahna uga hortagaan carqalad kasta oo amaanka waxyeelaynaya isku dhac qabiilna horseedi kara
2- in hacija iyo wixii ka danbeeya ay labda qabiil xeer utahay in ay kala qaataan dilka raga mag dhan 100 (boqol neef oo geel ah) oo lagu bixinayo mudo dhan
3- in hada wixii kadanbeeya beeshii dil gaytaa boqolka neef ee magtaah kasokow laga qaado 50,000 (kontokun oo Birr).
4- In beeshii latimaada falal nabad galyada wax udhimi kara sida duulaan, dakaano raadsi iyo ku xadgudub hanti da guud iyo tan gaarka loo leeyahaybaga laga qaado cigaab caawinaa da dhan 10 (toban kun oo birr) iyo toban qori
5- Si loo helo xal nabad galayo oo waara heshiiskanina unoqdo mi midha dhala in waxyaalaha aan wali lagu heshiinin iyo cabashooyinka jiraba lagu xaliyo (saxo) si nabad galayo ah oo dimuqraadid ah.
